PERSONALISED REFRACTORY SOLUTIONS

Trident Refractory Specialists specializes in the demolition and installation of Refractories to high-temperature industrial processes.

Our Services

Refractory lined components and vessels play an important role in the overall running and integrity of all major process industries, should installed **Refractory** linings fail then these process units will have to be shutdown to carry out repairs which at the end of the day puts the Owner/Client out of production and losing millions of Rands each day.

We at **Trident** believe that Refractory installation's or repairs to these process units should be installed with the highest level of quality workmanship, whilst closely following the owners/clients specifications, drawings and requirement. With our specialised team of experienced industry related employees, we are known for our advanced developments with in the refractory industry.

Trident has a huge network of industry related professionals, that we work with to ensure that installation and demolition of any refractory is performed within deadline.
